

Presentation Instructions

Slides are Due: Week 10.

Your slides will be presented with your Demonstration in weeks 11/12.

You are limited to 10 slides. Please use 18pt font for text on the slides, and 22pt font for headings, throughout.

Your slides should not be cluttered with text, but rather, highlight your story, and support your demonstration.

More specifically, your presentation should communicate the project clearly and convincingly to the client. It should explain the engineering problem your team addressed, why it matters, and the three extensions your team selected beyond the Interim Product Delivery. Please refer to the [rubric](#).

The presentation should communicate:

- the project context and client need;
- the three selected extensions;
- the engineering and customer value created by the extensions;
- supporting evidence such as plots, screenshots, logs, comparison results, diagrams, and other relevant visuals;
- limitations, trade-offs, and recommended future improvements.

Slides should be professional, well organised, and visually effective. Team members should communicate clearly, explain technical concepts appropriately for the client, and present as a coordinated and well-prepared team.
